

**OSINT INVESTIGATION &
INTELLIGENCE GATHERING REPORT**

Target Website URL: <https://www.chicken-road2.app/>

Prepared by (Name): ADENIYI MICHAEL OLAOLUWA

Institution: University of Ibadan Distance Learning Centre

SIWES Placement / Organization: Skillboost Africa

Date of Submission: 15/8/2026

1. Executive Summary

This report presents the findings of an Open Source Intelligence (OSINT) investigation conducted on the target website chicken-road2.app. Using publicly available tools including WHOIS, dig, dnsenum, openssl, curl, Wappalyzer, and subfinder, information was gathered on the site's domain registration, hosting infrastructure, DNS configuration, SSL setup, HTTP security headers, and underlying technology stack. The domain was registered through Key-Systems LLC in May 2025 and is proxied through Cloudflare, which masks the true origin server. The site runs on a modern stack (React, Next.js, Vercel) with a valid SSL certificate, but is missing key HTTP security headers, namely Content-Security-Policy and X-Frame-Options. The robots.txt file discloses internal path structures and explicitly blocks several SEO and AI crawler bots. No publicly indexed subdomains or sitemap content were found. Overall, the target shows a reasonably hardened infrastructure (Cloudflare proxying, HSTS, valid TLS) but has gaps in browser-level security controls that are worth addressing.

2. Target Overview

Site Purpose / Description:

Appears to be an online gaming/betting platform themed around a "chicken road" style game.

Target URL: <https://www.chicken-road2.app/>

3. Information Gathered

3.1 Domain Information

What was found:

- Domain registered via Key-Systems LLC
- It was created on 13th May, 2025, updated on 4th May, 2026 and set to expire 13th May, 2027

Tool / Website used:

- WHOIS Lookup

Source URL: <https://www.whois.com/whois/chicken-road2.app>

3.2 WHOIS Details

What was found:

- Registrar: Key-Systems
- Name servers: autumn.ns.cloudflare.com, denver.ns.cloudflare.com
- Status: client Transfer Prohibited.

Tool / Website used:

- WHOIS Lookup

Source URL: : <https://www.whois.com/whois/chicken-road2.app>

Screenshot:

The screenshot displays the Whois.com website interface. The browser's address bar shows the URL <https://www.whois.com/whois/chicken-road2.app>. The website's navigation bar includes links for Domains, Hosting, Websites, Email, Security, Whois, and Deals. A search bar contains the text 'chicken-road2.app' and a 'WHOIS' button. The main content area is divided into two columns. The left column, titled 'Domain Information', lists the following details: Domain: chicken-road2.app, Registered On: 2025-05-13, Expires On: 2027-05-13, Updated On: 2026-05-04, Status: client transfer prohibited, and Name Servers: autumn.ns.cloudflare.com, denver.ns.cloudflare.com. Below this is a section titled 'Registrar Information' which lists: Registrar: Key-Systems LLC, IANA ID: 1345, Abuse Email: abuse@key-systems.net, and Abuse Phone: +49.68949396850. The right column features a list of domain suggestions with 'Buy Now' buttons: chickenroad2s.com, chickenroad2farm.com, steakroad2.com, bbqroad2.com, steakroad2.net, and chickenroad2s.net. At the bottom right, there is a red promotional banner for '.space' domains, showing a price reduction from \$29.88 to \$1.18 with a 'BUY NOW' button and the text '*while stocks last'.

3.3 IP Address

What was found:

chicken-road2.app. 214 IN A 104.21.38.193

chicken-road2.app. 214 IN A 172.67.137.239

Tool / Website used:

- dig

Source URL: Command line (dig chicken-road2.app)

Screenshot:

5. Security Observations

Observation 1

What was observed:

- The site is missing the Content-Security-Policy and X-Frame-Options headers (confirmed via curl).

Why it matters:

- These headers are a browser's first line of defense against cross-site scripting (XSS) and clickjacking attacks.

Potential impact:

- An attacker could inject malicious scripts into pages or embed the site in a hidden iframe to trick users into unintended actions.

Observation 2

What was observed:

- robots.txt explicitly discloses internal paths such as /api/, /go/, and /pages/condition-utilisation, and blocks a long list of crawlers (AhrefsBot, SemrushBot, dotbot, Screaming Frog, ChatGPT-User).

Why it matters:

- While robots.txt is meant to guide search engines, listing sensitive paths publicly also hands that same information to attackers doing reconnaissance. The aggressive bot-blocking also suggests the site is actively trying to prevent automated scraping/analysis of its content.

Potential impact:

- Exposed API and internal paths could be targeted directly for probing, even though they're technically "hidden" from search engines.

Observation 3

What was observed:

- The true origin server IP is masked behind Cloudflare, and no subdomains or sitemap content were publicly discoverable.

Why it matters:

- This is a positive security practice — it reduces the attack surface by preventing direct access to the backend server and limits what's exposed to automated OSINT tools.

Potential impact:

- Lowers the risk of direct-to-origin attacks (e.g., DDoS, port scanning) and subdomain enumeration-based attacks.

6. Recommendations

- Implement a Content-Security-Policy header to restrict which scripts, styles, and resources can execute on the site, reducing XSS risk.
- Add an X-Frame-Options (or frame-ancestors CSP directive) header to prevent clickjacking via iframe embedding.
- Avoid listing sensitive internal paths (e.g., /api/*) directly in a public robots.txt — restrict access at the application/authentication layer instead of relying on robots.txt for obscurity.
- Continue leveraging Cloudflare's reverse proxy to keep the origin server IP hidden from direct exposure.
- Periodically re-check SSL/TLS configuration and header setup (e.g., via SSL Labs and securityheaders.com) to catch drift or expiry over time.
- Consider populating sitemap.xml properly if SEO visibility is desired, since it currently returns nothing.
